- ❑ Preserve & protect undeveloped land.
- ❑ Apply transfer of development rights programs and conservation design techniques.
- ❑ Enact & implement local open space funding programs.
- ❑ Promote infill & development in Centers and areas with multimodal transportation options.
- ❑ Update zoning and building codes to support transit-oriented & traditional neighborhood development.
- ❑ Integrate parks & public space into Centers.

Contingent Strategies under each Scenario

FOCUS AREA		DELAYED EXPECTATIONS	PEOPLE POWER	TECHNOLOGY in the DRIVER'S SEAT	INCLUSIVE TECH
ENVIRONMENT	CHALLENGES	Climate change advances faster than current forecasts, and a major hurricane hits the Delaware Valley.	Innovations intended to reduce GHGs do not become market ready as initially anticipated.	Increasing waste streams, particularly e-waste.	Development is increasingly decentralized and more mobile.
	ADAPTIVE STRATEGIES	Limit development in floodplains; undertake proactive retreats from low-lying areas; focus affordable housing development in high-and-dry areas, consider more aggressive anti-flooding treatments, such as China's Sponge City concept or Copenhagen's cloudburst boulevards and floodable parks.	Reduce GHGs with readily available technologies: tax credits for building and vehicle electrification; green building standards and energy efficiency; increased investment in transit, walking, and biking; solar and wind microgrids; land preservation; conservation tillage.	Enact Zero Waste policies, provide resources for self-repair of electronic and digital devices, and build the circular economy so that materials and resources can constantly be reused.	Increase the regional goal for preserved open space and agricultural lands.
