Interchange Improvement.											
77460	LincolnAve HomeTownSts(F)	The project area is located in the southeastern portion of Delaware County. The area is comprised of commercial and residential properties. The functionality and aesthetics of S.R. 420 (Lincoln Avenue), from just north of S.R. 13 (Chester Pike) to just south of the Amtrak overpass will be improved. The proposed work consists of new decorative pedestrian lighting, signage, benches, trashcans, pavement markings, decorative crosswalks, landscaping, concrete curb, concrete sidewalk and ADA ramps. The limits of work on S.R. 0420 is estimated to be from seg/off (0040/0245) to seg/off (0040/2132). Work to SEPTA property is not within the scope of work of this project; however, coordination with SEPTA has and will occur since they are adjacent to the project limits. 		ITS								
		Regional Traffic management center (RTMC) planning, designing and building/commissioning to optimize the performance of the surface transportation network by expending the current function of the freeway management systems to include active traffic management of dynamic Junction control, part time shoulder use, ramp metering, multimodal coordination, and proactive management of traffic signals along major regional arterial corridors .In addition the RTMC will collect and process/disseminate real time transportation data in order to measure performance.. This facility will be the technical and institutional hub to bring together the various regional jurisdictions, modal interests, and service providers to focus on the common goal of optimizing the performance of the transportation network.

		I-95								
		Traffic Modeling & Forecasting								
		This project provides for technical and planning assistance to PennDOT District 6 for support in implementation of the I-95 Reconstruction Projects, and other traffic studies as identified by PennDOT. DVRPC will be "on call" for quick-turnaround analysis or data collection tasks in support of specific and timely I-95 project planning needs. Tasks will include data collection, meeting and stakeholder coordination, traffic modeling and forecasting, and general research as needed.								
		This project will require an expansion of DVRPC staff to include a dedicated travel modeler to prepare traffic forecasts throughout the I-95 corridor in Pennsylvania. The additional staff member will report to the Manager, Office of Modeling and Analysis, and work with other OMA staff as needed to prepare traffic forecasts and other modeling services.								
		New traffic data and forecasts are needed for several tasks. These include analyzing additional interchange configurations to improve safety, reduce congestion, and address community concerns; support new or updated Point-of-Access (POA) studies; extend the horizon year of previous traffic forecasts in the corridor; analyze and plan for future freight activity; and prepare detour route forecasts for later construction phases.

92182	Expwy Ptrl 2013-16 Suburb	This program will provide for the operation of emergency service patrols on congested state highways to detect and clear incidents rapidly by providing emergency assistance to stranded motorists. Approximately half of all delays experienced by highway users in congested areas are caused by traffic accidents, vehicle breakdowns, and other incidents. Prompt incident management programs such as this, can reduce delay's significantly. Service will be provided on the following routes: I-76, I-95, I-476, Route 202, Route 422, PA 309, and US 30. Philadelphia									
Roadway Resurfacing									
All street segments will be milled and resurfaced with bituminous material and restriped. Any ground disturbance will occur within the existing right-of-way. The primary purpose of the project is to restore roadway surfaces to fully functional and optimal conditions; to provide smoother riding surfaces for enhanced traffic movement; to install pavement markings for better direction for motorists, bicyclists, and pedestrians and to upgrade non-compliant ADA ramps at crosswalks to current standards. In most cases, pavement restoration in the disturbed areas will match existing pavement types.

ADA Ramps

This project will include the design and construction of ADA ramps that were transitioned from other Federal Aid projects, including, but not limited to, Center City SE Quad Signals (MPMS #17655), Passyunk Ave Signals (MPMS #16987), 52nd St. Streetscape (MPMS #17829), Citywide Resurfacing 103 (MPMS #91837), and various streetscape projects; and as well as ramps located on Center City Philadelphia Federal Aid routes that were repaved with local funding. The ramps would have typically been included as design build items in the project contracts, however, in some instances, the urban context of the ADA ramp locations warrants further coordination or study. To allow the original construction projects to proceed in a timely fashion, these ramps were pulled from the original construction contracts, and will now be addressed as part of this transition project. This will allow the City to design and construct the ramps to current ADA requirements while providing for stairs, cellar doors, unique paving materials, adjacent historic properties and other considerations as necessary.

110965	Marshall Rd. Safety Improv (C)	Marshall Road Corridor Safety Improvements Delaware County additional turning lanes This traffic safety project consists of improvements along the Marshall Road (SR 2024) corridor between the intersections of Wycombe Avenue and Church Lane. Improvements along this corridor include: -Converting partial limits of Marshall Road from an undivided four-lane section to a three-lane section -Addition of a center-left turn lane -Adding exclusive left-turn lanes at intersections	PENNDOT	Construction	6	Delaware	2024	\$(237,361)	\$0	\$0

- Adding exclusive right-turn lanes at intersections
- Modify left-turn signal phasing
- Increase pavement friction on roadway segment and intersection approaches within road diet limits
- Interconnect signal with fiber optic and provide remote communication accessibility along corridor from PennDOT District 6-0 Regional Traffic Management Center (RTMC).

107697	Balligomingo Rd Restoration(Parent) (C)	Balligomingo Road Restoration West Conshohocken Borough, Montgomery County Highway Restoration This project involves the restoration and slope stabilization of Balligomingo Road. In June of 2015, heavy rains resulted in slope failure of the slope adjacent to Balligomingo Road (SR 3037) between Portland Road and the I-476 overpass. This failure resulted in the closure of Balligomingo Road to through traffic as debris and mud washed onto approximately 200 ft. of the roadway. Due to concerns over the stability of the slope, the road remains closed.	PENNDOT	Preliminary Engineering	6	Montgomery	3037	\$(28,872)	\$0	\$0
