Diverse Downtowns

75 of the region's downtowns were analyzed, and each were assigned a Diversity Score and a Pandemic Impact Score on scales of 1—100, with one being the most diverse and least impacted.

This effort found that more diverse downtowns were generally less impacted by the economic shutdown related to the COVID-19 pandemic.

All 75 of the downtowns that were analyzed are listed, along with their Pandemic Impact Scores, in order from most to least diverse.

Disclaimer

This is an analysis of visits to and trade areas of the region's downtowns. However, it is not an economic impact analysis. Retail sales were not part of this body of work.

Characteristics that reduced the pandemic's impact:

Downtowns with the following characteristics were generally less impacted by the pandemic than their peers.

Development

Recent mixed-use, residential, and retail developments within the downtowns increased diversity as well as resiliency.

Diversity

Downtowns with diverse built environments, demographics, local economies, mix of uses, and transportation options, were less impacted.

People

Diverse and permanent residential populations located within the downtowns provided retailers with customers even as people stayed close to home.

Trails

Existing Circuit Trails connected downtowns with open space and enabled alternative modes of transportation.

Walkability

Historic downtowns with more pedestrian-friendly built environments had greater resiliency.

Characteristics that exacerbated the pandemic's impact:

Downtowns that lacked the characteristics found to reduce the pandemic's impact, or that were more greatly defined by the following characteristics, were generally more impacted by the pandemic than their peers.

Cars

Auto-oriented downtowns with lower Walk Scores and more cars per household were more impacted by the pandemic.

Colleges

Downtowns that are overly-reliant on these anchor institutions were less resilient during the pandemic.

Goods & Services

As the share of Neighborhood Goods & Services (NGS) retailers increased in a downtown, so did the pandemic's impact.

Transit

The pandemic significantly reduced transit ridership, and this impact had a ripple effect in transit-oriented downtowns.

Vacancy

The pandemic had a greater impact as downtown vacancy rates increased.

Diverse Downtowns | Telford Borough, PA

For the 75 downtowns analyzed, each were assigned a Diversity Score and a Pandemic Impact Score on scales of 1—100, with one being the most diverse and least impacted. The more diverse downtowns were generally less impacted by the pandemic.

The civic and residential uses located in Telford's downtown add to its diversity, and there is a modest residential population. However, it lacks the historic and walkable built environment of other downtowns, its retail mix is overly reliant on *Neighborhood Goods & Services* (*NGS*) retailers, and it has one of the highest vacancy rates in the region. These qualities are why Telford received a Diversity Score of 67, which indicates that it is less diverse than most downtowns.

Telford received a Pandemic Impact Score of 59, which indicates that the downtown was more mpacted by the pandemic than the average downtown.

Diversity Score

Built environment, mix of uses, population, transportation, and types of downtowns

Pandemic Impact Score

Visits and trade area prepandemic, and during the shutdown and reopening periods

ødvrpc

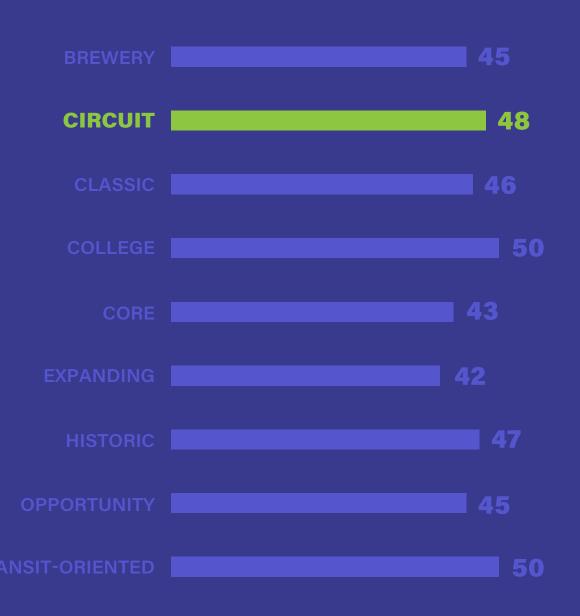

Downtown Typologies

Nine downtown typologies were identified and the average Pandemic Impact Score was determined for each: *Brewery (45), Circuit (48), Classic (46), College (50), Core (43), Expanding (42), Historic (47), Opportunity (45), and Transit-Oriented (50).*

In general, more typologies equated to a lower Pandemic Impact Score. Telford is considered to be one typology: *Circuit* (although the trail has not yet been built). Downtowns that are considered to be one typology had an average Pandemic Impact Score of 61.

It is worth noting that *Circuit* downtowns that have not yet built their Circuit Trail had an average score of 53, compared to a score of 48 for those that have an existing trail.

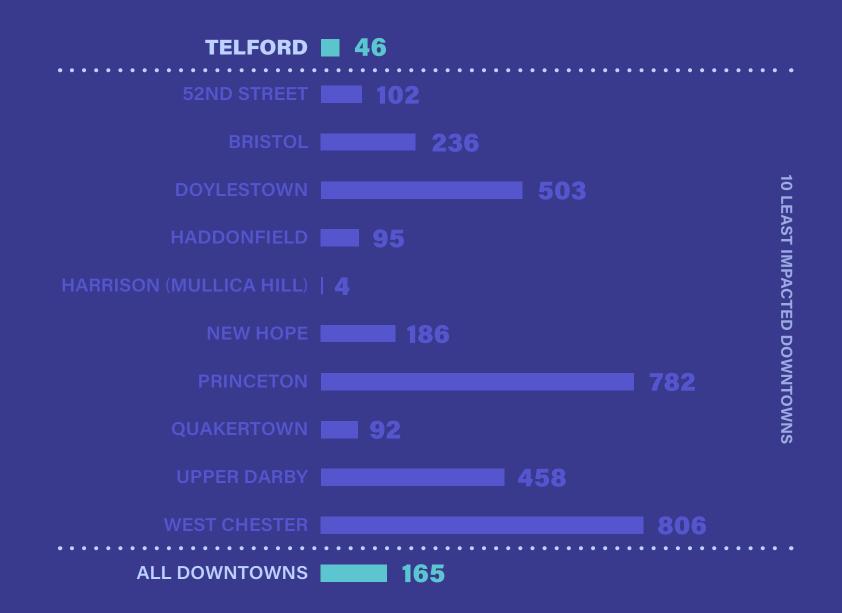

Downtown Population

A negative correlation between the estimated population of the region's downtowns and the Pandemic Impact Score was identified. In other words, the larger the downtown population, the smaller the impact.

In 2019, the population in Telford's downtown was estimated to be 46, compared to the average of 165 for all downtowns and 326 for the least impacted downtowns.

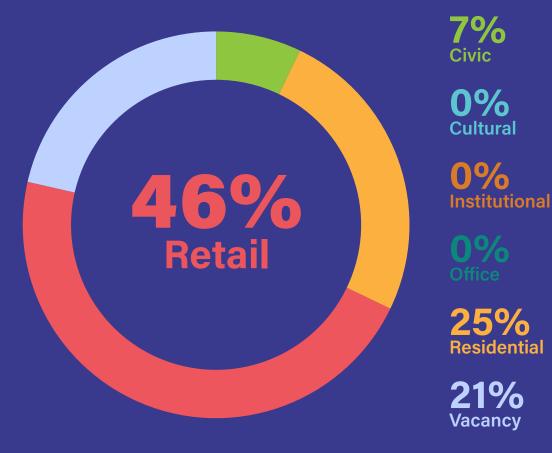

Retail Mix:

23% Food & Beverage (FB)

23%
General Merchandise,
Apparel, Furnishings,
& Other (GAFO)

54% Neighborhood Goods & Services (NGS)

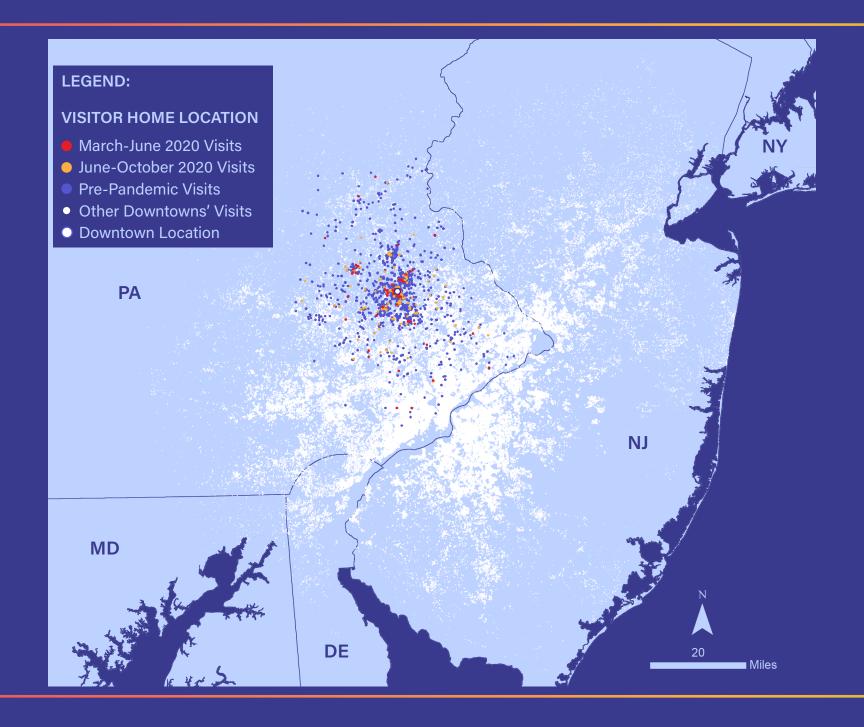

Mix of Uses

Retail accounts for 46% of the uses in Telford, which is much less than the averages of 57% for all downtowns and 60% for the least impacted downtowns.

In the least impacted downtowns, the share of *Food* & *Beverage* (FB) and *General Merchandise, Apparel, Furnishings* & *Other* (GAFO) retailers made up larger shares of 30% and 38%, respectively. On average, as the share of each of these increased the Pandemic Impact Score decreased.

Conversely, Neighborhood Goods & Services (NGS) retailers made up a much smaller share of 30% in the least impacted downtowns, while the average vacancy rate in the least impacted downtowns was significantly lower at 7.8%. In general, as the share of NGS retailers or the vacancy rate increased, so did the Pandemic Impact Score.

%dvrpc

Visits to Downtown

Geolocated, deidentified cellphone location data was analyzed to determine the pandemic's impact on visits to the region's downtowns and their trade areas. Visits to Telford were as follows:

Pre-Pandemic

Delaware: 0.0% New York: 0.0% Maryland: 0.0% Pennsylvania: 99.9% New Jersey: 0.1%

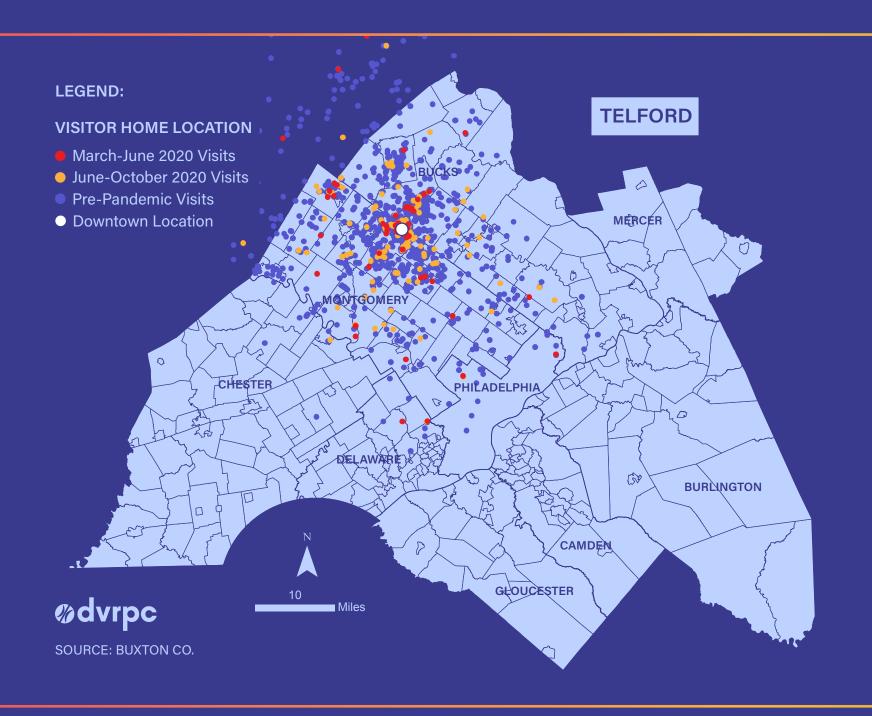

• Shutdown | March 13 - June 15, 2020

Delaware: 0.0% New York: 0.0% Maryland: 0.0% Pennsylvania: 100.0% New Jersey: 0.0%

• Reopening | June 16 - October 31, 2020

Delaware: 0.0% New York: 0.0% Maryland: 0.0% Pennsylvania: 100.0% New Jersey: 0.0%

Visits to Downtown

Before the pandemic, visitors to Telford came from throughout Bucks and Montgomery Counties, as well as from beyond the region. During the pandemic, most visitors came from nearby portions of Bucks and Montgomery Counties.

Between August 2018 and March 2020, 1,739 people visited the downtown, which was much less than the average of 8,800 visits for all of the downtowns.

During the shutdown (March 13 - June 15) there were 89 visits, and during the reopening period (June 16 - October 31) there were 182 visits to Telford.

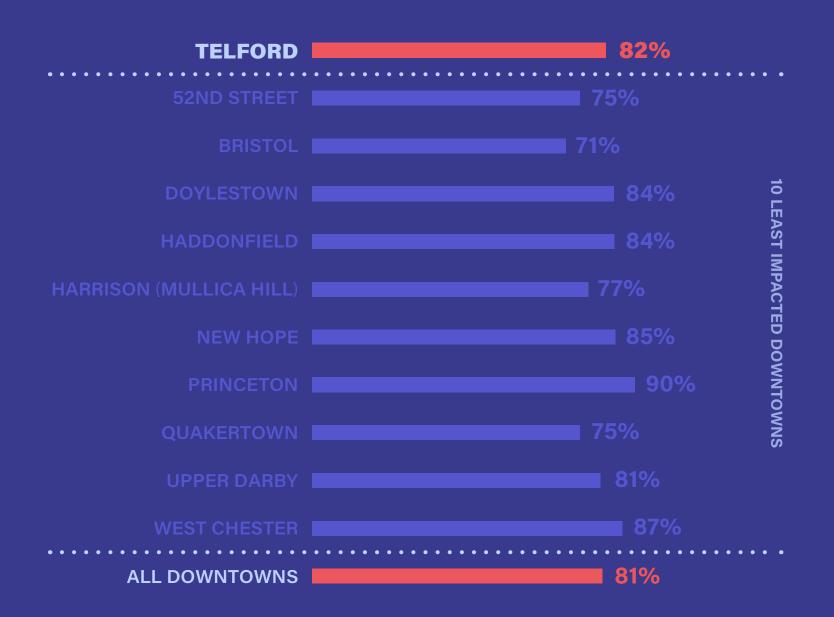

Shutdown Impact

March 13 - June 15, 2020

During the economic shutdown, there were 89 visits to Telford compared to 486 visits during the same period in 2019. This equated to an 82% reduction.

The average number of visits during the shutdown period was 439 compared to 2,450 visits during the same period in 2019, which equated to an average reduction of 81%.

Gloucester City's downtown had the smallest reduction in visits at 66%, and the average for the least impacted downtowns was 81%.

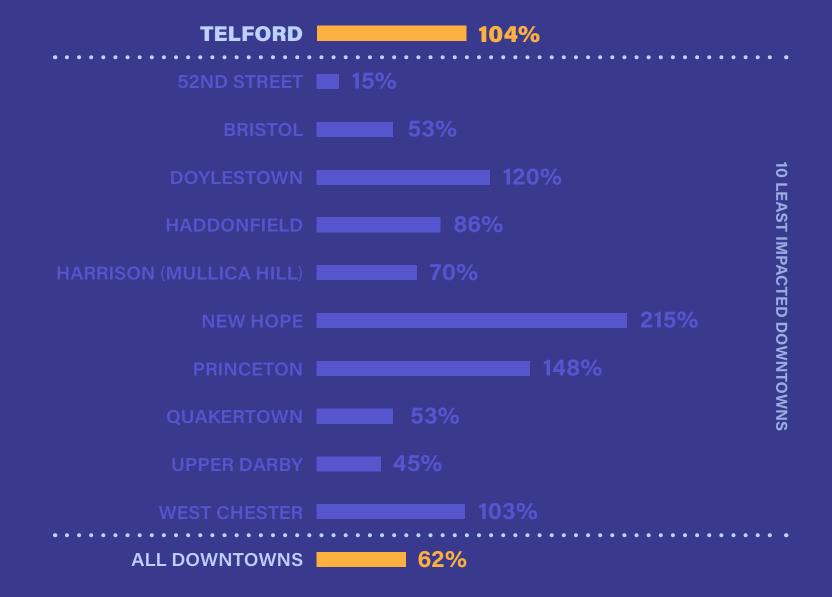

Reopening Rebound

June 16 - October 31, 2020

Visits to Telford increased by 104% during the reopening period to a total of 182 visits. This was 73% fewer than the 670 visits that occurred during the same period in 2019.

On average, visits increased by 62% for all downtowns, to approximately 700 visits, and by 91% for the least impacted downtowns, to approximately 1,700 visits.

New Hope observed the greatest increase at 215%, with more than 2,800 visits during that time.

Trade Area Recovery

(Drive Time in Minutes)

Telford's pre-pandemic trade area was a 24 minute drive time, and the trade area shrank by at least 58% during the shutdown to less than 10 minutes. Telford was one of six downtowns to have a drive time of less than 10 minutes during shutdown. During reopening, the trade area had at least a 50% recovery to 22 minutes.

The average pre-pandemic trade area was 31 minutes, with a 23% reduction during the shutdown down to 24 minutes. The average recovery was 10% for all downtowns up to 27 minutes.
